Speciality Chemicals
for Building and
Construction -
Redispersible
Polymer Powders

Redispersible Polymer Powders

AptiCem is the building and construction division of Devine Chemicals, a leading speciality chemicals manufacturer and global distributor.

Headquartered in the UK and operating internationally, the AptiCem product portfolio includes Redispersible Polymer Powders (RDPs).

Quality and efficiency are of paramount importance, and we offer a full technical service from our innovation centre based in the heart of the UK. We have been approved by LRQA and comply with ISO 9001:2015.

Our range of Redispersible Polymer Powder (RDP) grades increase the tensile adhesion, flexural and compressive strengths in construction applications including mortars, adhesives, repair compounds, putties, levelling compounds and slurry coatings.

AptiPol RDP 1018

AptiPol RDP 1018 is a multipurpose RDP used to increase tensile adhesion strength, flexibility, heat resistance and workability.

AptiPol RDP 3016

AptiPol RDP 3016 is a tile adhesive grade which increases tensile adhesion strength, flexibility, heat resistance and workability.

AptiPol RDP 3018

AptiPol RDP 3018 is a high-performance grade which increases tensile adhesion strength, flexibility, heat resistance, workability and hydrophobicity.

AptiPol RDP 3318L

AptiPol RDP 3318L increases tensile adhesion, flexural and compressive strengths. In addition, it boosts heat resistance, defoaming activity, workability and flow.

AptiPol RDP 3518H

AptiPol RDP 3518H has been designed to increase tensile adhesion strength, flexibility, heat resistance, workability and hydrophobicity in adhesives, mortars, sealants and grouts.
